

**MO+IVATION  
ALLIANCE**

The power of positive change.

## You won't find more secure technology.

### **EXPERIENCED. SECURE. CLOUD BASED.**

As a contractor for U.S. Government agencies, Universities, Hospital Systems and Third-Party Administrators, BSDI has met the most stringent criteria for security and availability standards in the industry. Feel confident knowing our highly secure, FedRamp authorized, Microsoft Azure cloud-based solution means our infrastructure is constantly monitored and frequently audited. We bring experience and sophistication to protecting your sensitive data.

- All of our technical team personnel have U.S. Government Public Trust Security Clearances.
  - Our on-staff Certified Information Systems Security Professional (CISSP) continuously monitors our infrastructure, data handling and security measures.
    - We conform to all administrative, physical and technical safeguards required to secure personal health information per HIPAA security rules.
      - Complex algorithms encrypt both data at rest and in transit requiring explicit permissions to view or access this data.
    - Our disaster recovery plan complies with NIST SP 800-34 standards for federal information systems.
  - Our hosting partner, Microsoft Azure, is a modern FedRamp authorized cloud solution with a highly secure, geographically diverse computing fabric that meets dozens of security standards (HIPAA, FedRamp, ISO27001, etc.)
  - Applications run on multiple instances to automatically scale with traffic increases.
  - System availability 99.95% during required availability time, excluding scheduled maintenance.
- Start small and escalate as your program or available population grows.
